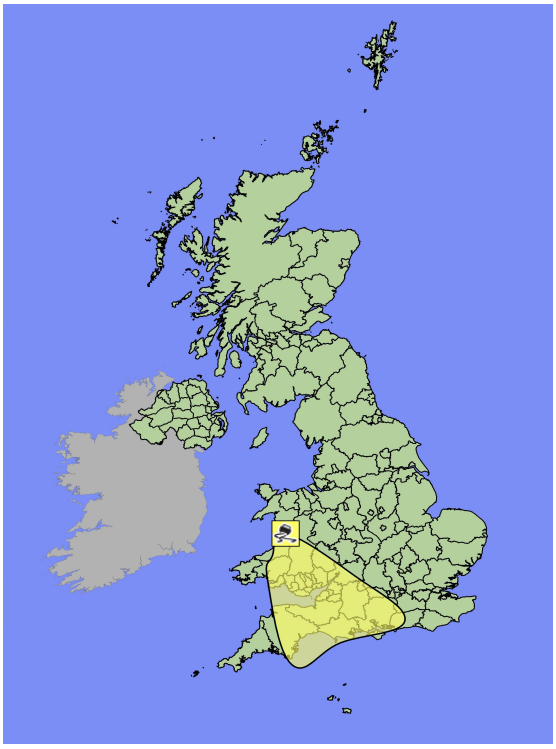
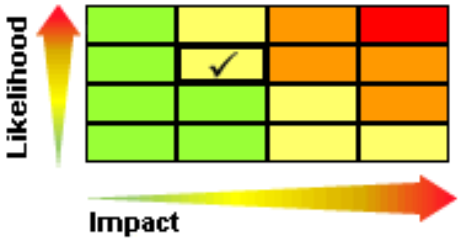
National Severe Weather Warning Service





Chief Forecasters Assessment
Frequent shower during the day and lasting into the late evening will leave a lot of surface water. Clearing skies once they start to die away will allow road surface temperatures to fall below zero in places, bringing the risk of icy stretches.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:05 on Wed, 05th Dec 2012** until **10:00 on Wed, 05th Dec 2012**

The public are advised to be aware that after late evening showers die away, icy stretches are expected to form locally on untreated surface.
